Assignment 7

Create a simple webpage that allows users to add tasks to a to-do list. Each task should have a title and description. Users should be able to mark tasks as completed, edit task details, and remove tasks from the list.

Webpage that includes:

A heading (<h1>) with the title "To-Do List".

An input form that allows users to enter a task title and description.

A button labeled "Add Task" that will add the task to the list when clicked.

When the "Add Task" button is clicked:

Create a new div for each task.

Inside this div, display the task title and description.

Add a "Mark as Completed" button, "Edit" button, and "Delete" button for each task.

When the "Mark as Completed" button is clicked:

Add a class called "completed" to the task's title and description to apply a line-through effect.

Update the button text to "Mark as Incomplete" and toggle the task's completion status.

When the "Delete" button is clicked:

Remove the task div from the taskList.

When the "Edit" button is clicked:

Allow the user to edit the task title and description. Replace the static text with input fields pre-filled with the current task data.

After editing, the button text should change to "Save" and clicking "Save" should update the task with the new details.

HTML CODE :

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>To-Do List</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>

  <h1>To-Do List</h1>
```

```

<div class="task-form">
  <input type="text" id="taskTitle" placeholder="Enter task title">
  <textarea id="taskDescription" placeholder="Enter task
description"></textarea>
  <button class="add-btn" onclick="addTask()">Add Task</button>
</div>

<div id="taskList"></div>

<script src="script.js"></script>
</body>
</html>

```

CSS CODE :

```

body {
  font-family: Arial, sans-serif;
  background-color: #f5f5f5;
  padding: 20px;
}

h1 {
  text-align: center;
}

.task-form {
  display: flex;
  flex-direction: column;
  align-items: center;
  margin-bottom: 20px;
}

input, textarea {
  width: 300px;
  margin: 5px 0;
  padding: 8px;
}

button {
  padding: 8px 12px;
  margin: 5px;
  border: none;
  border-radius: 5px;
}

```

```

    cursor: pointer;
}

.add-btn {
    background-color: #007bff;
    color: white;
}

.task {
    background-color: white;
    padding: 15px;
    border-radius: 10px;
    margin-bottom: 10px;
    box-shadow: 0 0 5px rgba(0,0,0,0.1);
}

.completed {
    text-decoration: line-through;
    color: gray;
}

.task-buttons {
    margin-top: 10px;
}

.task-buttons button {
    background-color: #e0e0e0;
}

.task-buttons button:hover {
    background-color: #d0d0d0;
}

```

JAVASCRIPT CODE :

```

function addTask() {
    const title = document.getElementById('taskTitle').value.trim();
    const desc = document.getElementById('taskDescription').value.trim();

    if (!title) {
        alert('Please enter a task title!');
        return;
    }
}

```

```

}

const taskList = document.getElementById('taskList');
const taskDiv = document.createElement('div');
taskDiv.className = 'task';

const titleEl = document.createElement('h3');
titleEl.textContent = title;

const descEl = document.createElement('p');
descEl.textContent = desc;

const btnContainer = document.createElement('div');
btnContainer.className = 'task-buttons';

// Mark Complete Button
const completeBtn = document.createElement('button');
completeBtn.textContent = 'Mark as Completed';
completeBtn.onclick = function() {
  const isCompleted = titleEl.classList.toggle('completed');
  descEl.classList.toggle('completed');
  completeBtn.textContent = isCompleted ? 'Mark as Incomplete' : 'Mark
as Completed';
};

// Edit Button
const editBtn = document.createElement('button');
editBtn.textContent = 'Edit';
editBtn.onclick = function() {
  if (editBtn.textContent === 'Edit') {
    // Change to edit mode
    const titleInput = document.createElement('input');
    titleInput.type = 'text';
    titleInput.value = titleEl.textContent;

    const descInput = document.createElement('textarea');
    descInput.value = descEl.textContent;

    taskDiv.replaceChild(titleInput, titleEl);
    taskDiv.replaceChild(descInput, descEl);

    editBtn.textContent = 'Save';
  } else {

```

```
// Save changes
const newTitle = taskDiv.querySelector('input').value;
const newDesc = taskDiv.querySelector('textarea').value;

titleEl.textContent = newTitle;
descEl.textContent = newDesc;

taskDiv.replaceChild(titleEl, taskDiv.querySelector('input'));
taskDiv.replaceChild(descEl, taskDiv.querySelector('textarea'));

editBtn.textContent = 'Edit';
}
};

// Delete Button
const deleteBtn = document.createElement('button');
deleteBtn.textContent = 'Delete';
deleteBtn.onclick = function() {
    taskList.removeChild(taskDiv);
};

btnContainer.appendChild(completeBtn);
btnContainer.appendChild(editBtn);
btnContainer.appendChild(deleteBtn);

taskDiv.appendChild(titleEl);
taskDiv.appendChild(descEl);
taskDiv.appendChild(btnContainer);

taskList.appendChild(taskDiv);

// Clear input fields
document.getElementById('taskTitle').value = '';
document.getElementById('taskDescription').value = '';
}
```

OUTPUT :

To-Do List

Enter task title

Enter task description

Add Task

To-Do List

Enter task title

Enter task description

Add Task

Running

5km running in morning

Mark as Completed

Assignment 5

i. Write a JavaScript program to take two numbers as input from the user and display their sum, difference, product, and quotient.

```
// Predefined numbers
let num1 = 12;
let num2 = 4;

// Calculations
let sum = num1 + num2;
let difference = num1 - num2;
let product = num1 * num2;
let quotient = num1 / num2;

// Display the results
console.log("Number 1:", num1);
console.log("Number 2:", num2);
console.log("Sum:", sum);
console.log("Difference:", difference);
console.log("Product:", product);
console.log("Quotient:", quotient);
```

```
Number 1: 12
Number 2: 4
Sum: 16
Difference: 8
Product: 48
Quotient: 3
PS C:\Users\dksin\OneDrive\Desktop\coding>
```

ii. Write a JavaScript program to create an array of 5 numbers and:
Find the largest and smallest number.
Sort the array in ascending and descending order.

```
// Create an array of 5 numbers
let numbers = [23, 7, 45, 12, 89];
console.log("Original Array:", numbers);
```

```
// Find largest and smallest manually
let largest = numbers[0];
let smallest = numbers[0];

for (let i = 1; i < numbers.length; i++) {
  if (numbers[i] > largest) {
    largest = numbers[i];
  }
  if (numbers[i] < smallest) {
    smallest = numbers[i];
  }
}

console.log("Largest Number:", largest);
console.log("Smallest Number:", smallest);

// Sort in ascending order using Selection Sort
let ascending = [...numbers];
for (let i = 0; i < ascending.length - 1; i++) {
  let minIndex = i;
  for (let j = i + 1; j < ascending.length; j++) {
    if (ascending[j] < ascending[minIndex]) {
      minIndex = j;
    }
  }
  // Swap
  let temp = ascending[i];
  ascending[i] = ascending[minIndex];
  ascending[minIndex] = temp;
}

console.log("Ascending Order:", ascending);

// Sort in descending order using Selection Sort
let descending = [...numbers];
for (let i = 0; i < descending.length - 1; i++) {
  let maxIndex = i;
  for (let j = i + 1; j < descending.length; j++) {
    if (descending[j] > descending[maxIndex]) {
      maxIndex = j;
    }
  }
  // Swap
```

```

    let temp = descending[i];
    descending[i] = descending[maxIndex];
    descending[maxIndex] = temp;
}

console.log("Descending Order:", descending);

```

```

Original Array: [ 23, 7, 45, 12, 89 ]
Largest Number: 89
Smallest Number: 7
Ascending Order: [ 7, 12, 23, 45, 89 ]
Descending Order: [ 89, 45, 23, 12, 7 ]
PS C:\Users\dksin\OneDrive\Desktop\coding>

```

iii. Create a simple form with fields for name, email, and age. Write JavaScript to validate that:

The name field is not empty.

The email is in the correct format.

The age is between 18 and 100.

HTML Code :

```

<!DOCTYPE html>
<html>
<head>
    <title>Form Validation</title>
</head>
<body>
    <h2>Simple Form</h2>
    <form id="myForm" onsubmit="return validateForm()">
        <label for="name">Name:</label>
        <input type="text" id="name"><br><br>

        <label for="email">Email:</label>
        <input type="text" id="email"><br><br>

        <label for="age">Age:</label>
        <input type="text" id="age"><br><br>

        <button type="submit">Submit</button>
    </form>

```

```
<p id="error" style="color:red;"></p>

<!-- Linking external JavaScript file -->
<script src="script.js"></script>
</body>
</html>
```

JavaScript Code :

```
function validateForm() {
    // Get values
    let name = document.getElementById("name").value.trim();
    let email = document.getElementById("email").value.trim();
    let age = document.getElementById("age").value.trim();
    let errorMsg = "";

    // Validate name
    if (name === "") {
        errorMsg += "Name cannot be empty.<br>";
    }

    // Validate email (just check for '@')
    if (!email.includes("@")) {
        errorMsg += "Email must contain '@' symbol.<br>";
    }

    // Validate age (must be a number between 18 and 100)
    let ageNum = parseInt(age);
    if (isNaN(ageNum) || ageNum < 18 || ageNum > 100) {
        errorMsg += "Age must be a number between 18 and 100.<br>";
    }

    // Display error messages if any
    document.getElementById("error").innerHTML = errorMsg;

    // If there are errors, prevent form submission
    return errorMsg === "";
}
```

Output :

Simple Form

Name:

Email:

Age:

iv. Write a JavaScript program to create an object representing a student (with properties like name, age, grades) and perform the following operations:

Add a new property class.

Update the student's grade.

Display all the student's information.

```
// Create a student object
let student = {
  name: "John Doe",
  age: 20,
  grades: 85
};

// Display original student information
console.log("Original Student Info:", student);

// Add a new property 'class'
student.class = "12th Grade";
console.log("After Adding Class:", student);

// Update the student's grade
student.grades = 90;
console.log("After Updating Grade:", student);

// Display all student's information
console.log("Final Student Information:");
```

```
for (let key in student) {  
    console.log(key + ": " + student[key]);  
}
```

Output :

```
Original Student Info: { name: 'John Doe', age: 20, grades: 85 }  
After Adding Class: { name: 'John Doe', age: 20, grades: 85, class: '12th Grade' }  
After Updating Grade: { name: 'John Doe', age: 20, grades: 90, class: '12th Grade' }  
Final Student Information:  
name: John Doe  
age: 20  
grades: 90  
class: 12th Grade  
PS C:\Users\dksin\OneDrive\Desktop\coding>
```

v. Create a function that takes an array of numbers and uses the array's built-in methods (like `map()`, `reduce()`, and `filter()`) to:

Remove all odd numbers.

Multiply the remaining numbers by 2.

Find the sum of the resulting numbers.

```
// Function to process the array  
function processArray(numbers) {  
    // 1. Remove all odd numbers  
    let evenNumbers = numbers.filter(num => num % 2 === 0);  
  
    // 2. Multiply remaining numbers by 2  
    let doubledNumbers = evenNumbers.map(num => num * 2);  
  
    // 3. Find the sum of resulting numbers  
    let sum = doubledNumbers.reduce((acc, num) => acc + num, 0);  
  
    return sum;  
}  
  
// Example usage  
let arr = [1, 2, 3, 4, 5, 6];  
let result = processArray(arr);  
console.log("Result:", result);
```

Output :

Result: 24

PS C:\Users\dksin\OneDrive\Desktop\coding>

Assignment-3

Objective : Build a multi-page website for a college event information and participant registration with following pages:

- 1) Homepage with Event name, date, and short description
- 2) Events page listing different competitions (use or)
- 3) A schedule or result table for events
- 4) Registration form for participants
- 5) A photo gallery page with multiple pictures in grid form.
- 6) Contact and FAQs page

Use list to display events information with formatting, table for event schedule or results, form to register for events, links to social media and previous year gallery.

Assignment-2

Objective : Create a multipage website for a travel agency with following pages:

- Home page with an introduction and banner image
- Packages page with tour package details in a table
- A booking form (name, dates, destination, package selection)
- Gallery page with destination images and captions
- About Us or Contact Us page with social media links

Use a table to show packages with price, duration, destination, booking form with multiple inputs and dropdowns, list of travel tips or must-visit places, embedded images with proper attributes and styling for layout.

Booking Page :

```
<!DOCTYPE html>
<html>
<head>
<title>Wanderlust Travels - Booking</title>
<link rel="stylesheet" href="style.css">
</head>
<body>

<header>
<h1>Book Your Trip</h1>
</header>

<nav>
<a href="index.html">Home</a>
<a href="packages.html">Packages</a>
<a href="booking.html">Booking</a>
<a href="gallery.html">Gallery</a>
<a href="contact.html">Contact Us</a>
</nav>

<div class="container">
    <form onsubmit="alert('Thank you! Your booking request has been
received.');
```

```

<label>Name:</label>
<input type="text" name="name" required>

<label>Travel Start Date:</label>
<input type="date" name="start-date" required>

<label>Travel End Date:</label>
<input type="date" name="end-date" required>

<label>Destination:</label>
<input type="text" name="destination" required>

<label>Select Package:</label>
<select name="package">
<option>Paris, France - $1500</option>
<option>Bali, Indonesia - $1200</option>
<option>New York, USA - $1000</option>
</select>

<label>Additional Requests:</label>
<textarea name="requests"></textarea>

<input type="submit" value="Book Now">
</form>
</div>

</body>
</html>

```

Contact Us Page :

```

<!DOCTYPE html>
<html>
<head>
  <title>Wanderlust Travels - Contact Us</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>

```

```

<header>
  <h1>Contact Us</h1>
</header>

<nav>
  <a href="index.html">Home</a>
  <a href="packages.html">Packages</a>
  <a href="booking.html">Booking</a>
  <a href="gallery.html">Gallery</a>
  <a href="contact.html">Contact Us</a>
</nav>

  <h1>DAKSH RAJ</h1>
  <p><strong>Electronics & Computer Engineering Student | Full-Stack Developer | Tech Enthusiast</strong></p>
  <p><em>Patiala, Punjab | +91 7082269244</em></p>

  <h2 id="about">About Me</h2>
  

  <p>I am a passionate <strong>Electronics & Computer Engineering</strong> student at <em>Thapar Institute of Engineering and Technology</em> with a CGPA of 8.81. Currently pursuing my B.Tech degree (2023-2027), I am dedicated to exploring the intersection of technology and innovation.</p>

  <p>Based in <strong>Patiala, Punjab</strong></strong>, I am enthusiastic about <em>full-stack development</em></em>, web technologies, and creating innovative solutions that make a difference. My academic journey has equipped me with a solid foundation in both theoretical concepts and practical applications.</p>

  <p>I believe in continuous learning and strive to stay updated with the latest technological advancements. My goal is to contribute meaningfully to the tech industry while building impactful projects that solve real-world problems.</p>

<h3>StayEase - Full-Stack Rental Web Application</h3>

<p>StayEase is a full-stack Airbnb-inspired platform that enables users to register, log in, and list or browse rental properties. The backend is built with Node.js and Express, while MongoDB handles data persistence. Dynamic pages are rendered using EJS templates, and sessions are securely managed using cookies. The project is designed for both development and production environment configuration.</p>

Interactive Tic-Tac-Toe Game

Built a responsive Tic-Tac-Toe game using **HTML5**, **CSS**, and **JavaScript**. Implementing win/draw logic through game-based pattern checks and move history tracking. Added features like *undo moves* and *real-time winner detection* while maintaining clean, performant code architecture.

Achievements & Leadership

- Discipline Head of Hostel** - maintained discipline and coordinated with hostel authorities
- Captained intra-hostel cricket team** - winner of inter-hostel cricket tournament
- Active participant in football and cricket** at university level
